

# BUSINESS APPLICATIONS MANAGER

## FUNCTION

Your role will be to digitally transform the company.

We expect you to find ways and methods to simplify and automate complex manual procedures using existing and cutting-edge technologies. To do this this you will need to understand the business at every level, from the production line to management reporting. You will understand the user and customer needs, create functional analyses of a wide variety of business processes, and find ways to increase efficiency and help the company scale up.

Your input will be given to the IT development team to develop and deploy the proposed business solution, but you will have primary responsibility for ensuring solutions are designed according to specifications and manage the portfolio of applications across the business.

The Business Applications Manager reports to the CEO
